
JFusion Authentication? Publish on frontpage?

Posted by JoMan - 2008/04/09 22:12

1. Is there a way of publishing news directly on frontpage using WindowsLiveWriter or Zoundry (which do you think is better)?

2. I installed jFusion and it works (PHPBB3 and JOOMLA). In instruction for jFusion it says that i have to turn off JoomlaAuthentication. When disable that plugin, MoableType doesn't work. Only when i enable both jFusionAuthentication and JoomlaAuthentication, everything works fine. Is it ok for this two plugins to be enabled both at the time?

By the way, MovableType XML-RPC works perfect!

Hi,

Thank you for use.

1. Is there a way of publishing news directly on frontpage using WindowsLiveWriter or Zoundry (which do you think is better)?

Please try Frontpage Auto Update(My Plugin)!:

The blog editor that I am using Windows Live Writer is used when new post, and Zoundry is used at the edit of the past article.

2. I installed jFusion and it works (PHPBB3 and JOOMLA). In instruction for jFusion it says that i have to turn off JoomlaAuthentication.

jFusion does not seem to give back an object same as .

Therefore I made a file corresponding to it.

Please use this.

<http://www.joomla.net/images/fbfiles/files/movabletype.zip>

Or please change the following lines of jfusion.php line:111.

```
if ($crypt) {
    if ($crypt == $testcrypt) {
        $user = JUser::getInstance($result->id); // add this
        $response->email = $user->email; // add this
        $response->fullname = $user->name; // add this
        $response->status = JAUTHENTICATE_STATUS_SUCCESS;
```

You must add it to the 85th line in the same way.

(...delete

)

Please try either mentioned above.
