
minimum lenght of search words

Posted by reverse1312 - 2008/05/06 01:38

Hello,

Very nice module !!!

I'm wondering why the number of characters limit does not work for me. Apparently no word under 5 letters can be included in the search. Is there a reason for that ?

If the answer is \"that's because searches about 2 or 3 letters words are not relevant\" I would then object that Google is dealing with it good it seems by himself, I believe, and if not, I would suggest to make a filter on language basis in which we could add every non relevant little words. That's what good Seo do (like vBseo)and it would be very helpfull in your module ;-) You will tell me \"that's a lot of work\", and in this case I have nothing more to say ;-)

I'm also wondering if the api keycode adds really someting. It seems to work without...

Thank you very much reading me

Re:minimum lenght of search words

Posted by Joomla! - 2008/05/06 09:06

Hi,

Thank you for use.

The word is allocated according to the setting of min word length.
For instance, if it is 3, the word of three characters or more becomes a retrieval word.

Thanks.

Posted by reverse1312 - 2008/05/06 21:17

Thank you for answering

It actually does not work in my case, don't know why

You can see that only over 5 char words are taken and sent to Googlesearch.
The words are taken from the title of article. And here the most important word is EX3 (=3chars). It's not in the search...

And you can see my settings here

Minimum Length 1
Maximum Number 4
priority order title

Thank you

Because you sent url, I was able to understand.

This was a bug.

I put the thing which I changed here.
Please set again after overwriting.

<http://www.joomla.net/images/fbfiles/files/helper.zip>

Thank you!

Thank you very much, I will try it quickly :-)

Re:minimum lenght of search words

Posted by reverse1312 - 2008/05/07 19:08

As if you had in advance guessed all you made an update !!! It's great !

:blush:

At the moment, the very good news for me is that the important 2 letters-words are ok in the searched words ;) and the bad news is that it still does not work
I've set again as they were...

There are no results anymore :(\"p2\" is fine taken for a searched word but I have no results anymore.

What did I do wrong ...?

Thank you for your time

Re:minimum lenght of search words

Posted by Joomla! - 2008/05/08 00:38

sorry...

I updated Google Custom Search to 1.1.0 for Joomla!1.5 and 1.0.x.

Please try new version.

Thank you!

Re:minimum lenght of search words

Posted by reverse1312 - 2008/05/08 22:52

Hello,

The file you gave in your precedent post is a file for the joomla 1.5 version. So it could not be ok for me since I am with

joomla 1.0.12.

Then I saw you had made an update (release 1.1.0) and reinstalled once. Result no more searches at all.

I reinstalled once more to be sure. Still no results. The words searched appear alright in the shown box and they can now be less than 5 chars. But for any reason, there are no results anymore. :-)

Did I possibly misconfigured it ? (I tried every possible setting, I think)

I think that I have to go back with the 1.0.0 version since it worked at least for 5 letters words... :-)

Thank you

I updated Google Custom Search to 1.1.0 for Joomla!1.5 and 1.0.x.

Please try new version.

Thank you!

Sure I saw it and installed it twice :-)

But as I said on post above : I get no more results...:(

Thank you

Because there was Bug, fixed it.

Please test version 1.1.1.

Thank you!

Re:minimum lenght of search words

Posted by reverse1312 - 2008/05/09 18:14

Hello,

I deleted all files, installed the new 1.1.1 version but the problem is still there. :S

Words searched ok but no search done

Re:minimum lenght of search words

You can see Google's Custom Search working by your setting.

http://demo10.joomla.net/

Please confirm setting once again.

Thank you!

Hello !

AAAAarrgh , you make it ok and I'm unable to redo it...:angry:

What is wrong in there ???

Thank you !

APIKey?

Thank you!

Re:minimum lenght of search words

Posted by reverse1312 - 2008/05/10 15:13

Hello !

I checked apikey on Google several times, I have 2 of them, none works in the module.
And both worked with the 1.0.0 version...

Without key it does not work either.

On the other hand the same GSE works ok directly in the Google interface...

Thank you.

...cause.. I see.

I think that API of Google became new and the conflict of Javascript has happened.

Please overwrite with an attached file.
root/mambots/mod_google_customsearch/tmpl/default.php

But this is not the problem that must deal in this module.

Thanks.

Re:minimum lenght of search words

Posted by reverse1312 - 2008/05/10 17:54

Hello !

It's overwritten,

The mod displays now 1 result and has a strange behaviour

The rest of the results seem to appear fugitively after clicking \"Search\" and quick disappear...

???

Thank you

Re:minimum lenght of search words

Posted by Joomla! - 2008/05/12 06:31

I put the thing which changed 1.0.1 here.

But the load method of Google Ajax Search API is old. But I will not have any problem if working normally.

http://www.joomla.net/images/fbfiles/files/mod_google_customsearch_1.zip

Thanks.

Re:minimum lenght of search words

Posted by reverse1312 - 2008/05/12 21:41

Hello !

Thank you so much ! It works now fine :-):laugh: :P

When I turn to Joomla 1.5, I will retry the new version of loading :-)

I'm surprised with one thing : It works with or without the apikey... It does not seem to matter...

Thank you !
