
Server Failure 801 - Authentication failed

Posted by Ironsoft - 2008/07/09 22:25

Hello,

we installed movabletype_2.0.0_english_for_1.0.x.zip and the installation worked fine, published the mambot and unzipped the file xmlrpc.zip.

When we try to access the Joomla installation with Live Writer, we get the error:

801

Authentication failed

The username (admin) and password are correct, they are also used to login to the /administrator directory.

Joomla! 1.0.12 Stable

PHP Version: 5.1.6

Any suggestions?

Best regards,
Thomas

hi,

Please update Joomla than version 1.0.13.

The generation method of the password hash is changed.

Thanks

Hi,

the upgrade to Joomla 1.0.15 worked fine.

Additionally I had to set the password for the admin user again, so the new password hash was written to the database.

Thanks for your support and that great integration tool.

Thomas
